TWO MINUTE TRAINING

SUBJECT: The Household Waste Exclusion and Renovation Debris – Part II

Q: Last week's "Two Minute Training" (2MT) stated EPA's clarification that household renovation debris with lead-based paints (LBP) is eligible for the household waste (HHW) exclusion but what about all the other types of renovation debris generated in households, are they also eligible for the HHW exclusion?

A: Per the [December 18, 1998, Federal Register](#) on page 70241, EPA stated:

"Although the Agency stated in 1984 that waste from renovation should not be covered by the household waste exclusion (because the waste was not composed primarily of materials routinely generated by consumers in a home), it has become evident that more and more residents are engaging in renovation or remodeling of their homes. This is strongly suggested by the greatly increased number of building permits that have been issued throughout the country for renovation of residences. EPA believes that, although many renovation and remodeling efforts are conducted by professional contractors, more and more are done by residents on their own. This may be shown, in part, by the widespread openings of home improvement stores throughout the United States which cater to do-it-yourselfers. It is also evident from: (a) The doubling of retail sales of lumber and other materials to consumers over the last 10 years from \$45 to \$89 billion; (b) steady increases of approximately 25% in hardware sales every 5 years; (c) the increase in consumers' purchase of home improvement products from \$38 to \$90 billion between 1980 and 1995; and (d) the projected increase in sales of home improvement products to consumers to almost \$115 billion by the year 2000 (Ref. 9). Thus, EPA now believes that LBP waste resulting from renovation or remodeling efforts conducted by residents of households does meet the two criteria for the household exclusion outlined above (i.e., the waste is generated by individuals in a household and it is of the type that consumers generate routinely in their homes)."

Since more and more homeowners are doing renovation work, renovation wastes have become a routinely generated household waste. Therefore if renovation waste meets the two criteria for the household hazardous waste exclusion, i.e., is generated by individuals in a household (homeowners or contractors) and is routinely generated consumer type waste, then any type of renovation waste can be eligible for the HHW exclusion – if it meets the two criteria.

SUMMARY:

- In 1984, EPA stated that renovation wastes were not covered by the household waste exclusion.
- Since then, more and more households are routinely generating renovation wastes and routine generation of consumer type waste is one of two criteria for meeting the HHW exclusion.
- If renovation waste meets the two criteria (household generated and consumer type waste), then renovation waste can be eligible for the household waste exclusion.
